

SmartVend

product line

QI Systems provides a complete integrated solution for using Smart Cards in a wide range of environments. QI supports everything from existing card schemes to low-cost memory cards, to custom loyalty systems using PIN-protected ID cards.

Designed for ease of use in unattended environments, QI's SmartKit[®] features a card acceptor, a user keypad and a backlit Liquid Crystal Display. Cash Card transactions are quick and simple. SmartKit[®] will validate the Cash Card and authorize the transaction in just a few seconds. Depending on the card specification chosen, the card balance before and after the transaction is easily displayed.

SmartKit Console is a Hand-held or countertop device with many applications. It can accept multiple cash card schemes and can store related transaction records. Reports can be retrieved using reporting software run on a desktop or laptop computer. SK Console is designed to be used with devices that have no room to place card reading equipment inside their enclosure. The Console is currently used as a cashier-operated hand-held POS terminal and card reload station, and provides automated self serve purchasing for photocopiers, fitness machines and other custom services. Machine control can be exerted by serial data communications or by direct contact I/O. Nearly any I/O requirement can be configured.

Laundry facilities, particularly in multi-housing buildings, are vulnerable to damage by thieves attempting to access cash. This creates revenue loss and repair costs for machine operators and causes frustration and fear in tenants. Card payment with SmartKit[®] Laundry can eliminate these problems and stimulate sales.

QI's Cash Card payment systems consist of an incremental multi-board architecture. Using a variety of exchangeable modules in addition to our standard Card Board for all payment systems means QI can create an efficient, cost-effective solution for any application... eliminating nearly all component customization.

The Card Value Center allows self serve smart card payment systems to be truly, fully automated and minimizes the requirement for staff involvement in daily operations. The Card Value Center sells new cards on demand and performs quick and simple value loads to new and used cards alike. Designed to support QI Systems Inc.'s SmartVend line of products, the Card Value Center capitalizes on the modular design of QI Systems' latest generation of Cash Card payment systems.
