## Smart Card

QI's Cash Card payment systems consist of an incremental multi-board architecture. Using a variety of exchangeable modules in addition to our standard Card Board for all payment systems means QI can create an efficient, cost-effective solution for any application... eliminating nearly all component customization.

Designed for ease of use, SmartKit<sup>®</sup> features a card acceptor, a user keypad and a backlit Liquid Crystal Display. Cash Card transactions are quick and simple. SmartKit<sup>®</sup> will validate the Cash Card and authorize the transaction in just a few seconds. Depending on the card specification chosen, the card balance before and after the transaction is easily displayed.

Laundry facilities, particularly in multi-housing buildings, are vulnerable to damage by thieves attempting to access cash. This creates revenue loss and repair costs for machine operators and causes frustration and fear in tenants. Card payment with SmartKit<sup>®</sup> Laundry can eliminate these problems and stimulate sales.

Newspaper vending boxes of varied design are in use around the world, representing another application of our modular design concept. QI can quickly develop a solution to the specific requirements of most publishers or equipment manufacturer.

The QI card is designed to work in all of these environments, as well as Parking, Water Dispensing, Waste Management, Oil Regulation, and countless others. Used with QI's handheld and kiosk based revalue systems, the QI Card provides a complete solution for many small transaction systems.
